

FlamMap Training

Help System

There are tutorials and example datasets available with the installation of the FlamMap program. Tutorial modules are accessed via the FlamMap6 Help system. In FlamMap6 from the main menu select **Help > Help** to access the Tutorials and other useful modules that explain and illustrate using the FlamMap program and its geospatial fire modeling capabilities. Users are encouraged to go through the following Books and subchapters.

- Using FlamMap Help
- Using the Tree Pane
- Runs (FlamMap and FARSITE)
- Using the Display Pane
- Edit Landscape
- Tutorials

The individual Reference topics go into details about required input files, settings, descriptions of file formats, descriptions of data needed to run FlamMap, and outputs. These materials are linked to the various FlamMap dialogs and shortcut menus.

The Technical Topics section you will find information explaining the background and science basis of the tools and models in FlamMap.

Formal Training

A online self-study course for FlamMap is currently being developed for deployment through the [Wildland Fire Learning Portal \(WFLP\)](#). This course is planned to be available in 2021. Check back here for updates on this course.
